

Utility and Roadwork Upgrades

Sanitary and storm utilities are underground infrastructure that manage wastewater and rainwater. Along Esquimalt Road, many of these systems are near or beyond their design lifespan and need to be replaced to meet current and future demands.

Storm Utilities

These systems manage rainwater and runoff from surfaces like roads and sidewalks to prevent flooding and reduce pollution into local waterways.

- ✓ Controls rainwater to reduce the risk of flooding and puddles on roads and sidewalks.
- ✓ Aging infrastructure allows roots and groundwater into the system, reducing capacity and increasing maintenance needs.

Sanitary Utilities

These handle and dispose of wastewater from homes, businesses, and industries. They include sewage systems that collect and transport wastewater to Capital Regional District treatment facilities.

- ✓ An essential utility that ensures wastewater is reliably transported to the treatment facility.
- ✓ Aging sewer pipes are more susceptible to root intrusion and groundwater infiltration, which decreases the system capacity and raises the risks of blockages.
