

Neighbourhood Watersheds Map It's all connected

Rain that falls in our neighbourhoods flows to the ocean. The same is true when watering your garden or lawn, or washing your car. Along the way, that water washes fertilizers and other chemicals from yards and streets into storm drains that flow into Esquimalt's marine environment. Whatever is carried – oil, anti-freeze, paint, soap, fertilizer, pesticides – can have harmful effects on plants and animals, and create an unhealthy place for us to swim and play.

This map shows where water runoff from your property and your neighbourhood ends up, and helps show how your actions as a resident may have distant and unexpected consequences.

How to Use this Map:

1. Find where you live on the map.
2. Note the map colour in your neighbourhood. This colour represents your Neighbourhood Watershed.
3. Look along the shoreline for a nearby watershed outflow that matches the colour of your neighbourhood. This outflow is where the water that falls in your neighbourhood flows into the ocean.
4. Take a walk down to your watershed outflow location and see what living creatures might be affected by pollutants flowing into the water. Can you think of products that you use that affect water quality flowing from your neighbourhood?

For watersheds with an unconfirmed outflow location there may be more than one route for water to drain. Water may travel over land or be part of a small storm water system, but regardless of how it moves, all routes empty into the ocean in the end.

The information on this map is obtained from various sources. As a result, the Township of Esquimalt cannot warrant that it is current, accurate or complete, and provides it for your convenience only. Use of this information without verification in the field is at your own risk.

How to read the map
